03 Detailed

04 Very detailed

US-01 Create my decks

Level: General

Detail 1/4

Priority: Must

Estimate: 1 SP

As a high school student, I want to make my own flashcard decks, so that I can study for my final exams.

US-02 Decks and cards

Level: Refined

Detail 2/4

Priority: Must

Estimate: 3 SP

As a high school student with many subjects, I want to create decks with a title and a subject, and add simple cards with a question and an answer, so that I can keep my study material in order and find it fast.

ACCEPTANCE CRITERIA

- 1 **Given** I am at home, **when** I create a deck with a title and a subject, **then** I see it in my deck list.
- 2 **Given** I open a deck, **when** I add a card with a question and an answer, **then** the card is saved in that deck.

US-03 Rich cards and fast import

Level: Detailed

Detail 3/4

Priority: Should

Estimate: 5 SP

As a high school student with many exams, **I want to** add pictures, hints and difficulty levels to my cards, and import many cards from a CSV file, **so that** I can build complete decks quickly and study with better material.

ACCEPTANCE CRITERIA

- 1 **Given** I am editing a card, **when** I add a picture in JPEG or PNG format with a size of 5 MB or less, **then** the picture is saved on the card.
- 2 **Given** I am editing a card, **when** I set a hint and a difficulty level (easy, medium or hard), **then** both are saved and the hint is shown during study.
- 3 **Given** I have a CSV file with front and back columns, **when** I import it into a deck, **then** every good row becomes a card and a summary shows the number of imported cards.

RULES

- A card always needs a question and an answer. Pictures, hints and tags are optional.
- If some rows are bad, the good rows are imported and the bad rows are reported with their row numbers.

US-04 Smart study and progress

Level: Very detailed

Detail 4/4

Priority: Must

Estimate: 13 SP

As a busy high school student who is preparing for final exams, **I want to** review my cards with a smart system that shows each card at the right time, rate my answers with four buttons (Again, Hard, Good, Easy), and see my streak, my correct answers and my next seven days of work, **so that** I can remember more and study less.

ACCEPTANCE CRITERIA

- 1 **Given** I have cards that are due today, **when** I start a study session, **then** I see only those cards, from the oldest to the newest, and the number of cards left.
- 2 **Given** I see a card, **when** I press Again, Hard, Good or Easy, **then** the system saves my answer and calculates the next date for that card.
- 3 **Given** I finish a session, **when** the queue is empty, **then** I see a summary with my number of cards, my correct answers and my time.
- 4 **Given** I study at least one card every day, **when** I study today, **then** my streak grows by one and I see it on my dashboard.
- 5 **Given** I have no cards due today, **when** I open study mode, **then** I can study ahead or study all my cards.

RULES

- Again is the hardest rating and Easy is the easiest. Easy gives the longest wait.
- A day counts for the streak only if I study at least one card in my local time.
- The forecast shows my cards for the next seven days in my time zone.
